REVISION WORKSHEET

CH-9

(A) Read the passage and give the answer.

Deciduous forests are also known as monsoon forests. The trees found in these forests shed their leaves in the dry season, mainly from May to June. They are tall and strong but not dense, as they do not grow closely. They have broad leaves. The commonly found trees in these forests are Sal, teak, Sheesham, mango, mahua, Sandalwood, bamboo and jackfruit. The wood obtained from these trees is used as a building material and for making furniture.
